

## Virkakatu 3 CampusNet

### Virkakatu 3 ADSL network

In Virkakatu 3 there is an ADSL network (speed 12/1 Mb/s). This connection needs an ADSL modem which you can get when signing the CampusNet agreement. You can also use your own ADSL modem (RFC 1483, Framework = LLC, VPI = 0, VCI = 33). After installing the ADSL modem you should install the CampusNet client (PPPoE-protocol). You will get the setup procedures for CampusNet client from PSOAS accommodation office when signing the CampusNet agreement. The setup procedures can also be found on PSOAS web site ([www.psoas.fi](http://www.psoas.fi)) and the CampusNet network website [http://10.132.0.2/CampusNet/Setup\\_procedures](http://10.132.0.2/CampusNet/Setup_procedures)

### Data security and Antivirus software

The CampusNet network is an Ethernet –network where computers “see” each other. That is why it is very important that every user make sure that his/her Antivirus software and firewall are in order before connecting to the network. The data security is the users own responsibility. You can get help in these matters from your student place. Also DNA offers services for CampusNet users in antivirus and firewall matters.

If PSOAS discover a “polluted” computer in the network, the connection will be shut down until the computer has been cleaned. Please, remember to read the terms of delivery of CampusNet, too.
