

Smart heating service Wattinen

Saving energy is an important task in our daily lives. In this property, the residents are assisted by the smart heating service Wattinen, which helps us use energy efficiently. It not only optimizes the operation of the heating system, but also provides residents with an easy way to reduce energy consumption whenever possible.

At the recommended temperatures, the residents' energy level remains high and the indoor air quality is good. Motiva's (a Finnish public sector sustainable development company) recommended temperatures for home are:

- living areas 20-21 °C
- bedrooms 18-20 °C

The temperature in your own apartment can be adjusted directly by rotating the thermostat, but many convenient additional functions can be found in the Wattinen smartphone app. For example, you can:

- set sleep time to a temperature of a couple of degrees cooler, which has been proven to improve sleep quality
- try if you are more energetic at home if you lower the daytime temperature by one degree, e.g. for a few weeks test period
- activate the "away" mode with a single click when leaving the house for several days, saving energy when the apartment is empty.

In the app, you can also conveniently see the climate impacts caused by temperature drops and energy savings in your apartment.

Download the app

Download the free Wattinen app on your smartphone from the app store.

The app will guide you step by step in choosing the default temperature you want, possibly a lower night temperature, and also how the heating can be lower when your home is empty for a longer period of time.

More instructions on how to download and use the app and how to use the thermostat can be found in Wattinen's quick guide. You can download it from wattinen.fi/asiakaspalvelu or you can order your own copy from Wattinen's customer service. You can also contact Wattinen customer service at all times if there are any problems with heating:
